

Life in Planet Alienmoon

5C Lau Tsun Yu Conrad

In the year of 2058, there were too many people and pollutions on Earth. Some of us had to move to other planets. My family and I have moved to another galaxy in the universe since 2058, about two years and seven months ago.

We have settled down on a blue and green planet named 'Planet Alienmoon'. At the beginning, life in here was hard and difficult. We could not find any jobs and enough food. Only rich people didn't have to starve. Later, things have improved since my dad got a job. We could have enough food and an alien pet. An alien pet is a pet that is very special. It is a trained alien so that it is kind, and even kids can take care of it.

On weekdays, we usually have breakfast at home. Children need not go to school because we have a robot teacher at every home to teach us everything we need to know. After the home lessons, we go shopping and have lunch in the shopping mall. At the weekend, we always go to the cinema or clubhouse to do whatever we like. I feel relaxed every time I go there. I like the relaxing life in this planet but I like the life on Earth more. I miss it. I would like to live on Earth again.
