# My Invention          6A Chow Lok Dao Daniel

After months of work, I finally succeeded! I invented a time machine! I made a prototype for testing. I wondered what period of time to go to first. Suddenly, an idea came to my mind - going to the cretaceous period to see some dinosaurs!

I hopped into my time machine, set the timer to 65 million years ago, and pressed the "away we go" button excitedly. A flash of electric blue light zapped through the window, and the time machine spun round and round, until it finally came to a stop. I looked out of the window, I saw Tyrannosaurus rex, Pterodactyl and many other dinosaurs. The time machine worked! I stepped out of the time machine tremblingly and I found something that blew my mind. At first, there were beautiful lakes, tall green palm trees, active volcanoes and of course, lots of dinosaurs. Then, I saw a bright flash in the sky. I was a bit confused for seconds, and then I realized, it was the asteroid that made dinosaurs go extinct! I was frightened and ran back to my time machine immediately. I set my timer to 65 million years in the future and pressed the "away we go" button. Just before I saw the electric blue light, I saw a great flash of orange light and heard a loud bang. The asteroid had struck the ground! The time machine spun, and I was finally back home fortunately after taking this breathtaking adventure.

Driven by my curiosity, I decided to go forward 100 years to see how technology would improve throughout all these years. I set the timer and began another exploration. When I arrived, I was amazed by the modern and sleek skyscrapers, and there were hovering cars - "hovercars", and supersonic aircraft flying all over the sky. Luckily, in this modern and high-tech city, nature was still upheld. There were lots of parks with flowers and lakes. Many solar panels were installed on top of the buildings to enhance the sustainability of the city. It was comforted to know that the world would still be an environmental-friendly place in the coming 100 years. I went back into my time machine and returned home thankfully.

Suddenly, I heard a loud ringing noise. It was my alarm! What a beautiful dream! However, that dream inspired me to create my own time machine when I grow up so that I can travel and explore the endless time and space.
